

1      **ABSTRACT OF THE DISCLOSURE**

2           An audio player includes a processor, an infrared transmitter electrically  
3        connected to the processor to transmit and receive digital information, a USB interface  
4        electrically connected to the processor for connection with other appliance, a controller  
5        electrically connected to the processor and having at least one key to correspond to and  
6        control options in the processor, a display electrically connected to the processor to  
7        display the selected option in the processor by the controller, a storage electrically  
8        connected to the processor to store information therein, a decoder electrically connected  
9        to the processor to decode digital audio information so that the digital audio information  
10      is converted to digital information, wherein the decoder is a MP3 decoder and an  
11      analog/digital converter electrically connected to the decoder to convert the decoded  
12      digital information to audio signal to enable other appliance to properly play the audio  
13      signal directly.
